

# Some Techniques in Sinusitis Irrigation

**S**inusitis irrigation is one of the most important things to know something about when it comes to controlling and minimizing the symptoms of the inflammation of the sinuses. Remember that sinusitis is caused by the actual blockage in the nasal passages that creates the mucous membrane to be trapped within the cavities. This trapping now causes this and the pressure in some areas of the face. In order for you to take care of sinusitis, you should know how to induce and help the body to be able to drain out the trapped mucus.

## Sinusitis Irrigation, the Basic Tool is the Saline Solution

It is a mixture of salt and water. Some people try to use plain tap water in irrigating their sinuses but little do they know, tap water can worsen the infection of the some other primary. Presently there are available solutions on the market that can be used, but if you are not sure what to use, better talk with your physician to learn the proper saline focus that is appropriate for your case.

## Still, If You Possess the Solution but You Don't Know What to Do With It, It's Useless

So, you have to know several techniques or means to help yourself irrigate your nasal airways. Again, a word of warning, you should talk to your doctor to help you choose what technique to use. Also, you should remember that running of such techniques may cause a drying out from the nostrils. Now, here are some of the techniques that you might consider for yourself.

## Manual Inhalation

This is the most common when you do not want to use any device. You just put the solution in your cupped palms and inhale the perfect solution is directly one nostril at a time. The setback for using this method is that not all of the solution may enter your nose.

- **Nasal Spray.**
- This may be a better approach than that of the first one.
- Sprays are available in the market and can be easily attained.
- The important thing for it to be effective is for you to know the correct procedure in using a nasal spray.
- Generally, here is the correct way to use like sprays.
- First is to make sure that your hands are clean.
- Second, you have to remove the excess mucus in your nose.
- Third, place the tip of spray in a nostril while covering the other nostril.
- Make sure that your head is kept straight.
- Then, breathe in immediately whilst compressing the spray bottle to make sure that the solution goes in directly to your sinuses.
- Do the same with the other nostril.

*“ Neti Weed. This is also a common approach in irrigating the nasal cavities. It is a pot that aims to supply the saline solution in directly to your sinuses. It is just like a simple pot. You just have to put the solution in it, tilt your head a bit, a pour the contents directly in one of your nostrils till the perfect solution is fades the other nostril.*

- Injectable.
- Now, apart from sprays and also the neti weed, saline solutions can be used in irrigation with the use of injectibles.
- It works the same way as the spray but the main difference is that it is like a needle that uses a plunger.
- Electric irrigators.
- There are also devices that instantly deliver saline solution as part of your sinuses with the use of motored pumps.
- Joseph Martinez was a long time sinus sufferer until he discovered amazing natural solutions.
- After many years of research he shares everything.
